Alerting Abstract JP A

NOVELTY - The device includes a multilayered structure comprising an organic electroluminescent layer (110) formed between an anode electrode (104) and a cathode electrode (112), is arranged over a substrate (100) in the dense space (400). An alkaline metal made adsorption layer (120), arranged over the multilayered structure, absorbs oxygen and the moisture content in the dense space.

DESCRIPTION - An **INDEPENDENT CLAIM** is included for organic electroluminescent display device manufacturing method.

USE - Organic electroluminescent display device.

ADVANTAGE - The moisture and oxygen within display device are absorbed, thereby providing stable display over a long period of time.

DESCRIPTION OF DRAWINGS - The figure shows a sectional view of the organic electroluminescent display device.

100 Substrate

104 Anode electrode

110 Organic electroluminescent layer

112 Cathode electrode

120 Adsorption layer

400 Dense space
